

AutoCAD DWT Template files

When referring to a template in AutoCAD it means an all-encompassing file that contains your personal or company default settings for producing your drawings. Typically this would include: -

Your standard layer list along with colours and linetypes: -

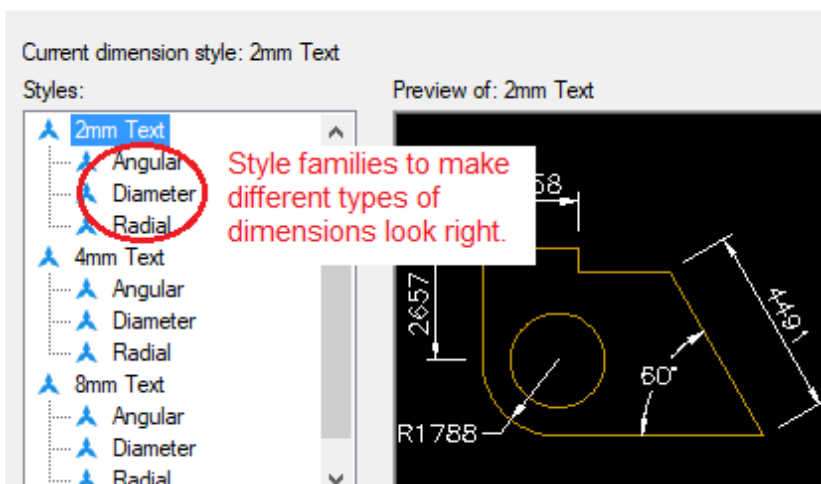

Styles for different types of text that you need to create: -

Your dimension style settings for creating dimensions: -

Dimension Style Manager

Drawing sheet borders and title blocks and plot styles: -

The image shows a drawing template title block with the following fields and annotations:

- DRAWING TITLE:** Example drawing showing template features
- DRAWN BY:** GB (with a dropdown menu showing Gordon Banks, Bobby Moore, and Geoff Hurst. A red arrow points to the dropdown with the text "A selectable list of names.")
- CHECKED BY:** BM
- DRAWING NO:** DW-001-456 (A red arrow points to this field with the text "Enter the drawing number once and fill in the title block automatically.")
- SCALE:** 1:50 (A red arrow points to this field with the text "Text fields to automatically enter date and scale details.")
- DATE:** 01/04/2020
- REVISION:** (Empty field)

At the bottom, there is a command line showing "DW-001-456" circled in red, with a red arrow pointing to it from the "DRAWING NO" field.

Your own custom scale list: -

Scale to fit	
1:1	Scales are in METRES: -
Scales are in mm: -	
1:2	1:100m
1:5	1:200m
1:10	1:250m
1:20	1:500m
1:25	1:1000m
1:50	1:1250m

Other items such as: -

Pre-defined viewports.

Multi-leader styles for text and other types of leader labelling.

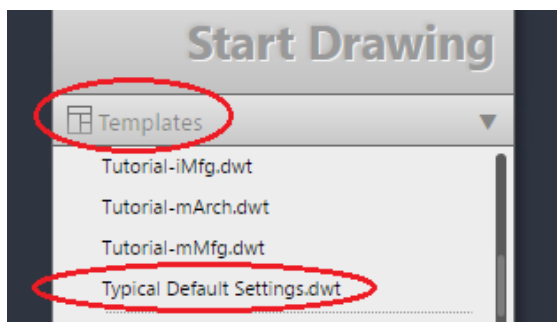

Date table styles.

Layout tabs with page setups for printing and other output such as PDF.

System variables as required. E.g. Measurement set to 1 and Insunits set to 4.

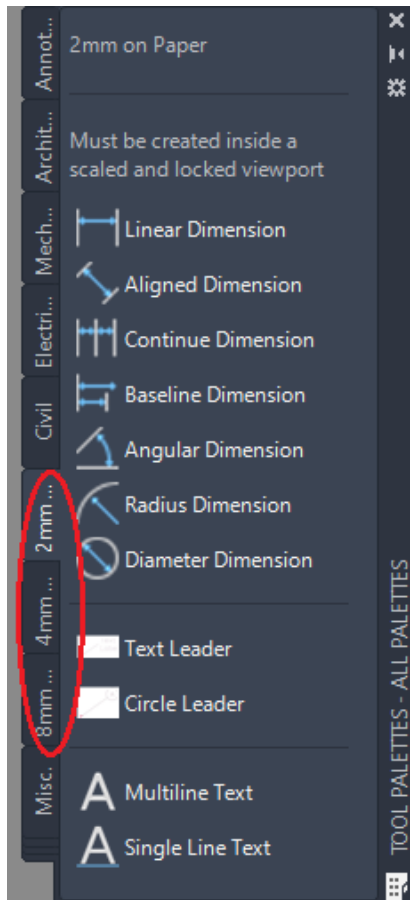

Drawing limits set to a reasonable size to optimise the initial screen size in model space.

The end result would be a DWT file that you would select when you begin a new drawing to start from scratch or to start a new drawing and then import an existing drawing :-

Tool Palettes

Create one click short cuts to your everyday commands using tool palettes.

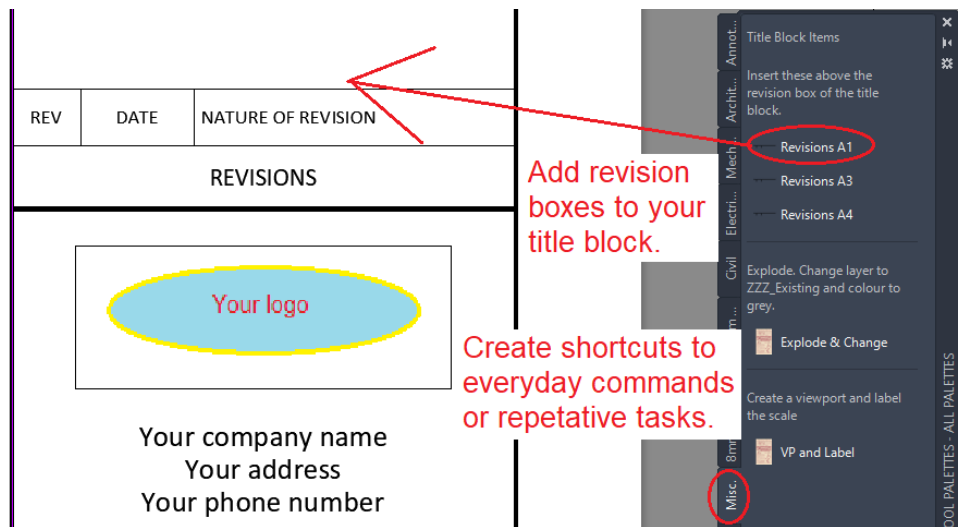

Shown here are example tool palettes detailing commands for creating text, dimensions and leaders whilst automatically using the correct layers and styles.

These tool palettes go hand in hand with the creation of the template file.

It will ensure that each user will not only have easy access to the different commands for text, dimensions and leaders but will create them on the correct layer whilst using the correct style.

I would be looking to create three tool palettes for different annotation sizes in paper space and an additional tool palette of miscellaneous commands and shortcuts.

Costs: -

- | | |
|------------------|---|
| Option A: | To create an AutoCAD DWT template file with your specific company requirements as per the detailed description on the previous page - £200 plus VAT payable on completion. |
| Option B: | To create a set of four No. Tool Palettes as shown above for annotation and miscellaneous commands - £200 plus VAT payable on completion. |
| Option C: | Special rate to create both of the above - £300 plus VAT payable on completion. |
